

## Symarctic Solutions Ltd. Launches ExtGPS Application

ROVANIEMI, FINLAND – November 8, 2011

Symarctic Solutions Ltd. announced today the first official release of ExtGPS application. ExtGPS is an application that allows end users to share their mobile's built-in GPS signal via Bluetooth and/or USB connection. Location details received from GPS are shared as NMEA data.

ExtGPS allows you to use your mobile phone's built-in GPS module externally on laptop via Bluetooth or USB cable. Application is targeted for all GPS enabled Nokia S40, S60 and Symbian^3 based devices, allowing you to use existing, more sophisticated GIS applications.

ExtGPS is available from Nokia Store:
